Structural Equation Modeling – A gentle introduction

08 July 2013, 09.00–17.00 h

MMZ, Carl-Zeiss-Str. 3, SR 1100

Over the last decade Structural Equation Modeling (SEM) left the esoteric ivory tower and moved mainstream in many exact and applied sciences relying on survey data. Nonetheless the accurate application of this method is not trivial. Many pitfalls are lurking for the innocent researcher.

This gentle introduction into SEM relies on a non-technical hands on approach, assuming only basic mathematical knowledge. Helpful real life examples and practical exercises are used throughout the workshop.

This one day basic workshop creates a good foundation for advanced applications of Structural Equation Modeling. The workshop will rely on the software AMOS, although the principles are applicable to other packages like MPlus as well
